#### **Comprehensive Graduation Training Syllabus**

#### 1. Course description

Graduation comprehensive training is a comprehensive teaching phase that follows the completion of theoretical and related practical teaching as per the curriculum plan. It is an essential component of undergraduate education, marking the final stage of students academic journey and serving as a comprehensive quality assessment. This phase further deepens and broadens professional direction instruction; it is an effective means for cultivating students ability to apply theory to practice and enhance their independent working skills. It is also a crucial teaching stage for developing students engineering practice capabilities, evaluating their mastery and application of fundamental theories, knowledge, and skills, as well as their ability to analyze and solve practical problems. The course aims to comprehensively train students in applying the basic theories, knowledge, and skills they have learned to make professional choices, design engineering projects, develop information models, manage construction, and conduct scientific research. Throughout this process, students should be able to evaluate the impact of civil engineering design and construction, as well as solutions to complex engineering problems, on society, health, safety, law, and culture.

### 2. The graduation requirements supported by this course and the implementation path

#### of this course

(1) The graduation requirements that this course can support

| order<br>number | Graduation<br>requirement<br>indicators | Specific content of graduation requirement indicators   |
|-----------------|---|---|
| 1               | Graduation<br>requirement 3.3           | Master the basic construction process, be able to collaborate or<br>independently complete the virtual design and construction of<br>a certain engineering project, and fully consider the social,<br>health, safety, legal, cultural and environmental constraints in<br>the design and construction process, reflecting the innovative<br>consciousness |
| 2               | Graduation<br>requirement 5.2           | Be able to use modern tools to analyze, calculate and design<br>complex civil engineering problems, and be able to analyze the<br>effectiveness and limitations of the results.   |
| 3               | Graduation<br>requirement 5.3           | Master the operation of basic software required for the development of construction industry informatization, and have the ability to build and apply information model.  |
| 4               | Graduation<br>requirements 6.1          | Familiar with the standards, policies and laws and regulations<br>related to civil engineering professions and industries,<br>understand the impact of different social cultures on<br>engineering activities.  |
| 5               | Graduation requirement 6.2              | Ability to analyze and evaluate the impact of civil engineering<br>project design and construction, complex engineering problem<br>solutions on society, health, safety, law and culture.   |
| 6               | Graduation<br>requirements 7.2          | It can think about the sustainability of engineering practice<br>from the perspective of environmental protection and<br>sustainable development, and evaluate the possible damage<br>and hidden dangers caused by civil engineering practice to<br>human beings and the environment.   |
| 7               | Graduation<br>requirement<br>10.1       | Understand the differences between communication with peers<br>and the public in the industry, and be able to communicate<br>effectively with peers and the public in the industry for<br>complex civil engineering problems.   |

#### (2) The implementation path of graduation requirements indicators in this course

#### 1. Course objectives

Through the teaching of this course, students will master the basic knowledge and have certain application ability. The specific objectives of this course are as follows:

Course objective 1: Design scheme. Master the basic construction process, complete virtual design and construction for design tasks, reflect innovative consciousness in the process of design and construction, and complete the design scheme.

Course objective 2: Scheme evaluation. Be able to evaluate the proposed design scheme, and fully consider the constraints of society, health, safety, law, culture and environment in the evaluation.

Course objective 3: Design by hand. Correctly apply the principles and methods in the industry standards and regulations to perform manual calculations for structures and components.

Course objective 4: Design computer. Use industry-related software for calculation, and use the data, graphics and other results of computer for effective expression.

Course objective 5: BIM Model. Correctly apply BIM software such as Revit to build information model.

Course objective 6: Design Summary. Through a complete comprehensive training process, students will be able to evaluate the impact of engineering practice on environment and sustainable development in complex civil engineering problems.

Course objective 7: Communication. Be able to communicate and exchange with industry peers and the public in an effective manner through oral or written means for complex civil engineering problems.

2. The corresponding relationship between the course teaching objectives and graduation requirements

| Graduation requirement indicators | Course teaching objectives |
|-----------------------------------|----------------------------|
| 3.3                               | Course Objective 1         |
| 6.2                               | Course objective 2         |
| 6.1                               | Course objective 3         |
| 5.2                               | Course objective 4         |
| 5.3                               | Course objective 5         |
| 7.2                               | Course objective 6         |
| 10.1                              | Course objective 7         |

#### 3. Intended learning outcomes

| train objective            |   |                      |             | Intended   | Corresponding |

| Assessment items           | Ability items                                 |
|----------------------------|---|
| 1. Design scheme           | The scheme design is based on the application |
| 2. Programme evaluation    | project evaluation                            |
| 3. Design hand calculation | Standard application of hand calculation      |
| 4. Design computer         | Computerized calculation and analysis         |
| 5.BIM model                | BIM modeling                                  |
| 6. Design summary          | Sustainability assessment                     |
| 7. Communication           | Effective communication                       |

# 5. The tasks undertaken in the cultivation of the ability to solve complex engineering problems

- 1. Choose your own topic and determine complex engineering problems;
- 2. Carry out scheme design and comparison;
- 3. Carry out structural hand calculation and computer calculation to solve complex

engineering problems;

4. Effective communication to ensure that the design results can be accepted by everyone.

#### 6. Non-technical ability training and observation

1. Communication and communication are cultivated through communication with teachers and classmates in daily life;

2. Cultivate non-technical ability indicators through paper.

3. When evaluating non-technical ability indicators, the students performance is scored independently by the instructor, the reviewer and the defense teacher respectively.

#### 7. Course ideological and political design

Design is a rigorous process. In the whole process, we first cultivate a rigorous and realistic learning spirit, and then cultivate the awareness of rules through design such as scheme and structure. The cultivation is mainly realized through independent learning and communication with instructors. VIII. Course evaluation and continuous improvement mechanism

(2) Continuous improvement mechanism

(a) Establish a continuous improvement system

① Establish a continuous improvement group for this course.

2 The head of the course continuous improvement group shall be responsible for organizing, implementing and supervising the continuous improvement process.

③ Develop continuous improvement measures.

(b) Establish a course continuous improvement team

Team leader: Professional person in charge Members: All teachers of comprehensive training for graduation

(c) Continuous improvement of the course

(1) Regular assessment mechanism: teachers understand students learning situation through daily guidance and make records of guidance, and comprehensively consider their regular grades.

<sup>(2)</sup> Achievement assessment mechanism: evaluate and analyze the design calculation book and design drawings, count the places where students are likely to make mistakes, analyze the reasons for the mistakes, count and summarize the deficiencies in the cultivation of students abilities, consider the remedial measures to be taken, and make improvements in the next cohort of students.

(d) Continuous improvement measures of the course

(1) For the regular assessment of grades, measures should be taken to improve the communication with students individually.

<sup>(2)</sup> For the assessment of results, unified guidance measures are taken to improve students who take make-up exams according to the problems that appear in their exams.

③ Strengthen the guidance of the next generation of students in order to address the areas where students are prone to make mistakes.
